

EWGLAM FINAL DISCUSSION

Minutes

Compiled by Andras Horanyi

Date: 8th of October, 14:15 – 15:15

Chairman: Claude Fischer

Remark: Around 20 minutes from the Final Discussion was devoted to discussions about LAMEPS (because there was no discussion time remaining in the morning session).

Format of the meeting: Basically the recent format of the meeting found to be satisfactory by the participants. On the other hand the meeting was very “dense” and full, therefore an extension of half day is accepted (the official part of the meeting would be finished at Thursday noon and the SRNWP Advisory Committee would meet Thursday afternoon). It is noted that two more sessions are anticipated for the next year (“System” and “Application”), therefore it will not be easy to fit even to the half day extension. At the same time it was agreed that the EWGLAM Final Discussion and the SRNWP Business Meeting should be unified with a bit of economy of time.

Proceedings: It was agreed that no proceedings will be compiled, “only” the presentations (in pdf format) will be put on the SRNWP webpage.

Next meetings: The 2009 meeting will be organised by the Hellenic National Meteorological Service in Greece one week earlier than the usual schedule (due to the clash of meetings). The date therefore will be 28 September – 1 October. The 2010 meeting will take place in Exeter (United Kingdom) continuing the usual rotational system.

The participants warmly thanked the excellent organisation of the meeting and the hospitality of the Spanish colleagues.
