

Evaluation of the added value of LAMEPS

Yong Wang, ZAMG

With contribution from Bellus, Kalin, Kann, Tascu, Smet, Spaniel, Steinheimer, Weidle, Wittmann, etc.

Essential questiones on LAMEPS

What is the more added value of LAMEPS to its counterpart global EPS?

Is a LAMEPS adding value to its existing high resolution deterministic Limited Area Model (LAM) forecast?

Performance has been verified:

ALADIN-LAEF and ECMWF EPS

ALADIN-LAEF and ALADIN-Austria

LAEF: Limited Area Ensemble Forecasting

Ensemble Size	16 +1
horizontal resolution	18 km
Vertical resolution	37 levels
Runs/day	2 (00,12UTC)
Forecast range	60h
Time step	720s
Coupling-model	ECMWF SV EPS
Coupling-update	6h

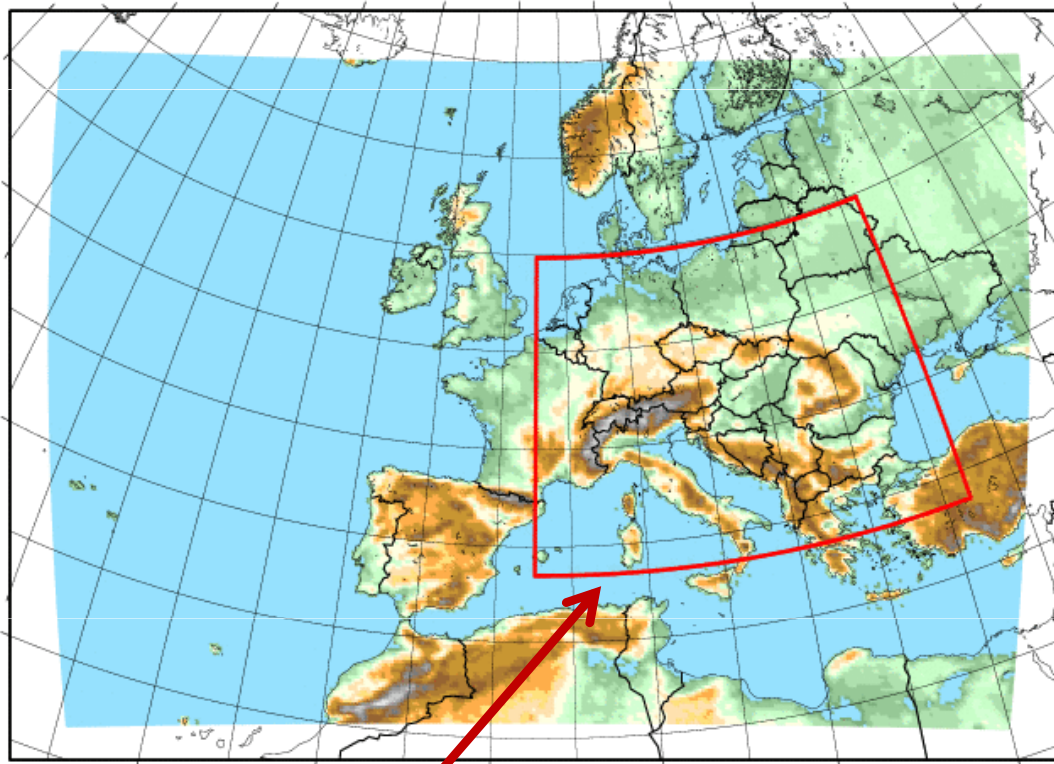

Atmosphere perturbation: **Blending
ALADIN Bred + ECMWF SV**

Surface perturbation: **Non-Cycling
surface Breeding**

Model perturbation: **multi-physics**

Conclusions

The more added values of LAEF on ECMWF EPS and ALADIN-Austria have verified:

1. LAEF is more skillful than ECMWF EPS on surface parameters, except T 2m.
2. No clear advantage found for LAEF upper air parameters
3. LAEF is outperform to the time lagged ALADIN with higher resolution.
4. LAEF Ensemble mean is better than ALADIN with higher resolution, except 2m Temperature.

THANKS!
