

EWGLAM final discussion

02.10.2014
Offenbach, Germany

Special topic for 2015

It has been agreed that the special topic of the EWGLAM/SRNWP meeting for 2015 is **“fog and visibility forecasting possibly including the representation of aerosols and other atmospheric components”**.

Structure of the meeting's programme

It has been decided that the current structure of the meeting (Consortia presentations, Review talks, Poster session, Thematic sessions organized by Expert Team chairs, EWGLAM final discussion, SRNWP business meeting) will be kept. Review talks will focus on the special topic (visibility, fog, atmospheric components). Clive Wilson will initiate a common verification exercise regarding visibility, where the main goal will be to point out problems regarding fog / visibility forecasting.

Date and place of the next workshop

The next 37th EWGLAM / 22nd SRNWP meetings will be organized in Serbia (probably Belgrade) between the 28 September and 1 October 2015 or between the 5 and 8 October 2015 (to be refined with the local organizers).
