# Introduction

- Clouds are affected by virtually all processes in the atmosphere;
- Cloud prediction is essential for prediction of radiative forcing and precipitation;
- New satellite data give 3D-information on clouds.

# Theory

The equation of radiative transfer:

$$\mu \frac{dI_{\lambda}(\tau, \mu, \phi)}{d\tau} = I_{\lambda}(\tau, \mu, \phi) - (1 - a)B_{\lambda}(T; \tau) - \frac{a}{4\pi} \int_{4\pi} d\omega' p(\tau, \mu', \phi') I_{\lambda}(\tau, \mu, \phi) - S_{\lambda}^*(\tau, \mu, \phi) \quad (1)$$

Chandrasekhar (*Radiative Transfer*, Dover, New York, 1960.)

Thomas and Stamnes (*Radiative Transfer in the Atmosphere and Ocean*, Cambridge University Press, New York, 2002.)

## Inherent optical properties (1)

- $\tau$ : Optical depth [-], the integrated extinction;
- $a$ : Single scattering albedo = 1 - emittance [-];
- $p$ : Phase function [-], in practice a function only of the asymmetry factor  $g$  (Henyey & Greenstein 1941);
- Lower boundary albedo / BRDF [-].

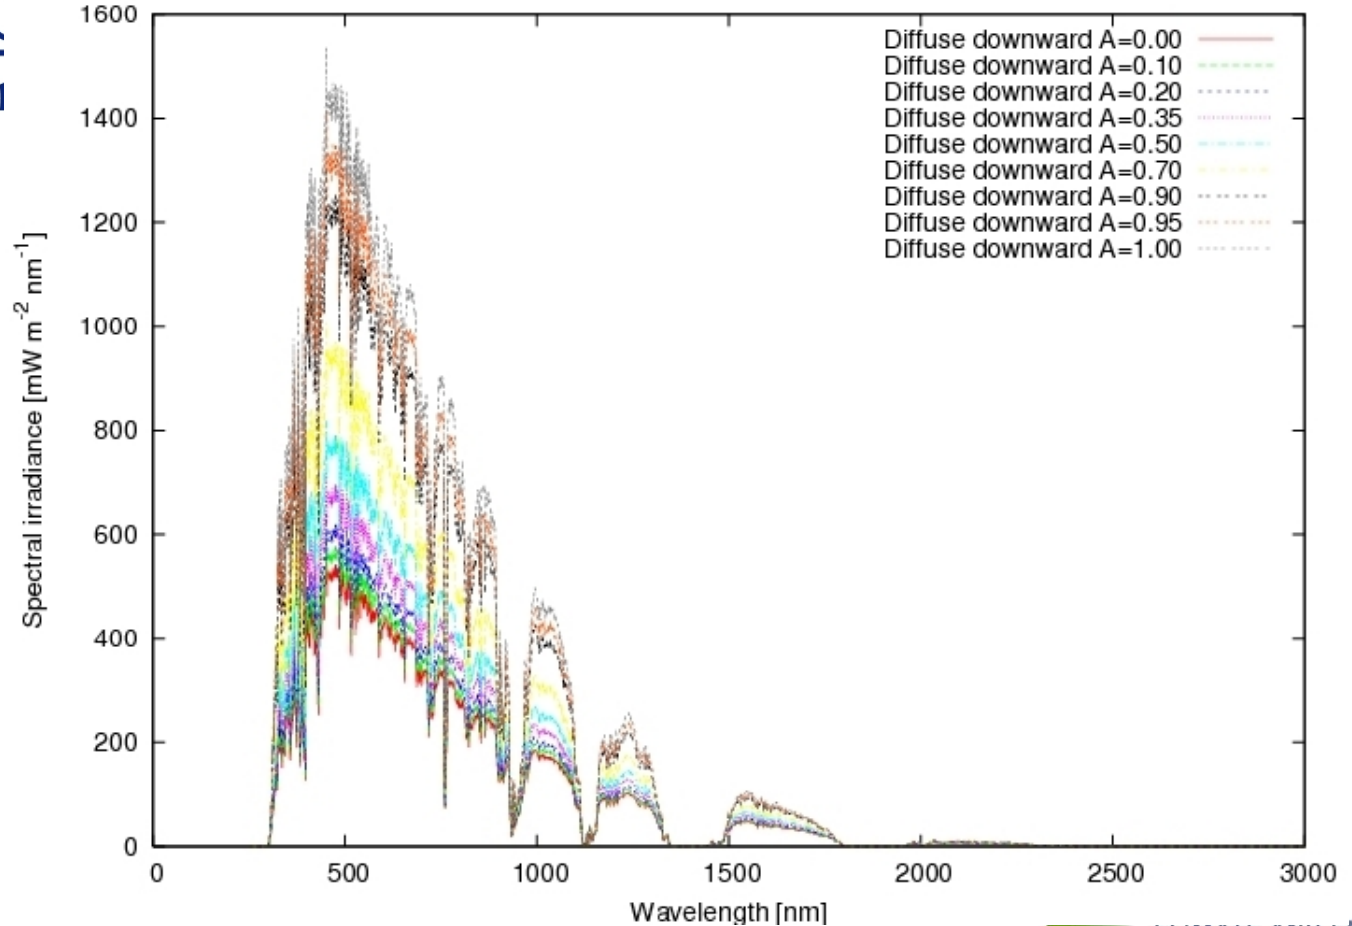

## Inherent optical properties (2)

- $\tau$ : Optical depth [-], the integrated extinction;
- $a$ : Single scattering albedo  
= 1 - emittance [-];
- $p$ : Phase function [-], in practice a function only of the asymmetry factor  $g$  (Henyey & Greenstein 1941);
- Lower boundary albedo / BRDF [-].
- “Cloud albedo” is not an inherent optical property!

Sagan and Pollack: “Anisotropic nonconservative scattering and the clouds of Venus”, (*JGR*, 1967: 72: 469–477).

# Clouds AOPs affected by surroundings

## Inherent optical properties (3)

The good news is that the cloud IOPs can be adequately derived from only two physical quantities

- Cloud liquid water path (CLWP) [ $\text{kg}/\text{m}^2$ ];
- Effective cloud drop radius ( $r_e$ ) [ $\mu\text{m}$ ].

$$\tau_{vis} = \frac{3CLWP}{2r_e\rho_l}, \quad a_{vis} = 1, \quad g_{vis} = 0.85 \quad (2)$$

$$r_e \equiv \int_0^\infty dr n(r)r^3 / \int_0^\infty dr n(r)r^2 \quad (3)$$

Hu & Stamnes (*J. Climate*, 1993; 6: 728–742.)

# Satellite data

- MSG Cloud physical products (CPP) (Roebeling *et al. JGR*, 2006; 111: D20210; Meirink *et al. 2009*);
- CloudSat 2B-tau (Stephens *et al. JGR*, 2008; 113: D00A18).

## Model data

- DMI-HIRLAM S03;
- HARMONIE Denmark (non-hydrostatic).

# DMI-HIRLAM & MSG CPPs

HIRLAM S03 cloud liquid water path [ $\text{kg m}^{-2}$ ]

HIRLAM - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

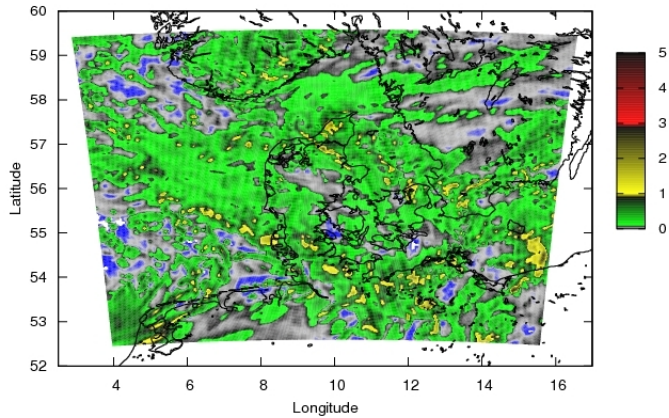

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

2009-09-03 00:00 +11h forecast

# HARMONIE DK & MSG CPPs

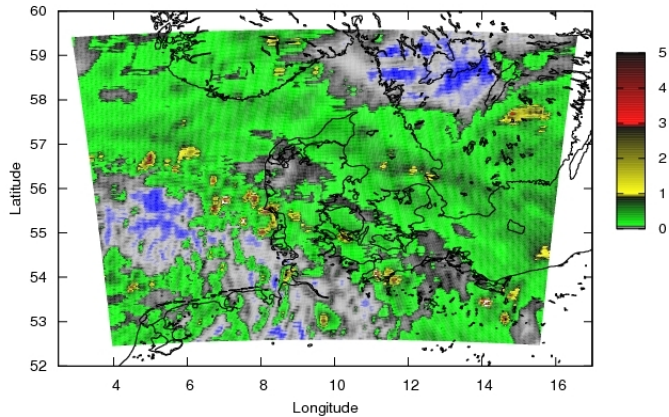

HARMONIE cloud liquid water path [ $\text{kg m}^{-2}$ ]

Harmonie - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

2009-09-03 00:00 +11h forecast

# DMI-HIRLAM & MSG CPPs

HIRLAM S03 cloud liquid water path [ $\text{kg m}^{-2}$ ]

HIRLAM - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

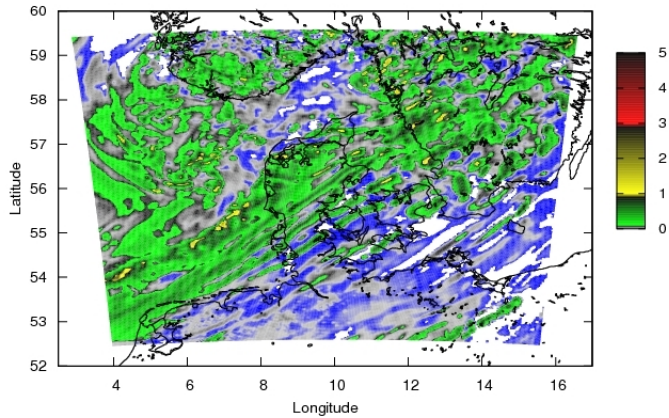

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

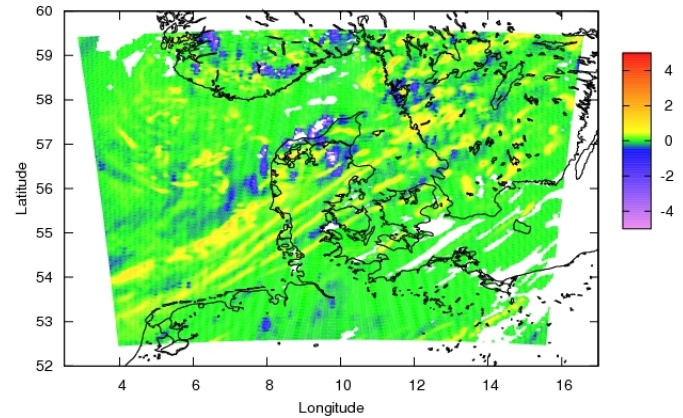

2009-09-04 00:00 +15h forecast

# HARMONIE DK & MSG CPPs

HARMONIE cloud liquid water path [ $\text{kg m}^{-2}$ ]

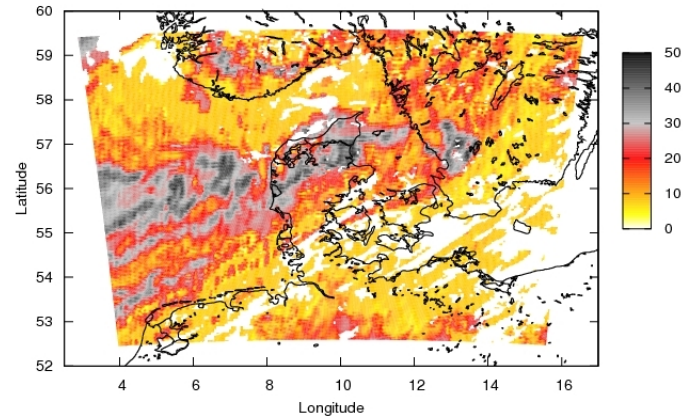

Harmonie - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

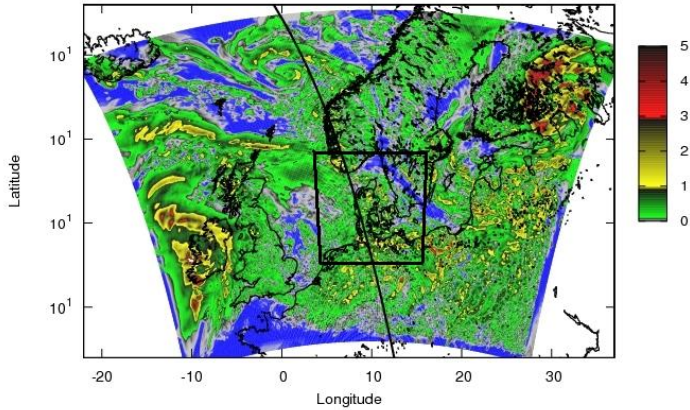

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

2009-09-04 00:00 +15h forecast

# DMI-HIRLAM & MSG CPPs

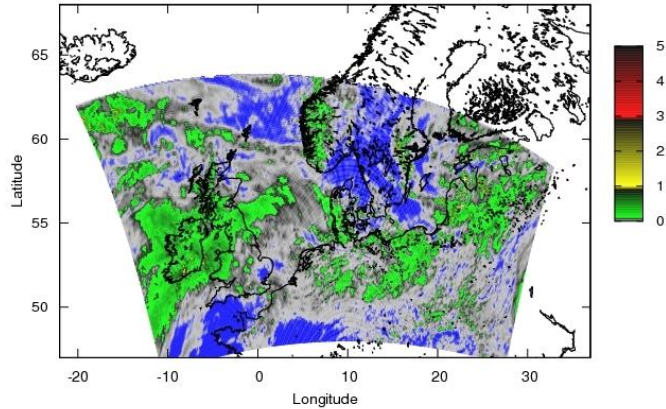

CloudSat profile / HIRLAM cloud liquid water path [ $\text{kg m}^{-2}$ ]

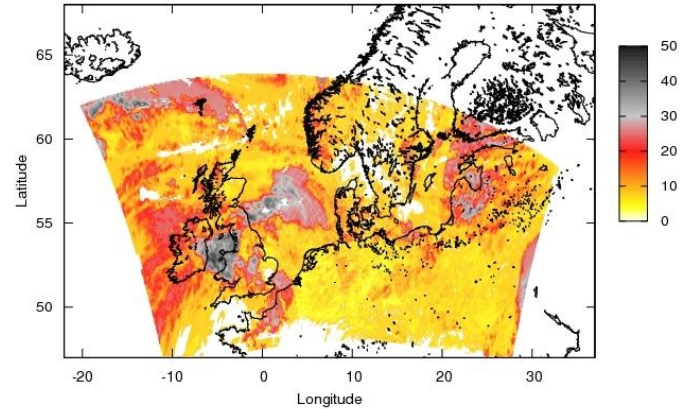

HIRLAM - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

2009-09-06 00:00 +13h forecast

# HARMONIE DK & MSG CPPs

CloudSat profile / Harmonie cloud liquid water path [ $\text{kg m}^{-2}$ ]

Harmonie - MSG CLWP difference [ $\text{kg m}^{-2}$ ]

MSG cloud liquid water path [ $\text{kg m}^{-2}$ ]

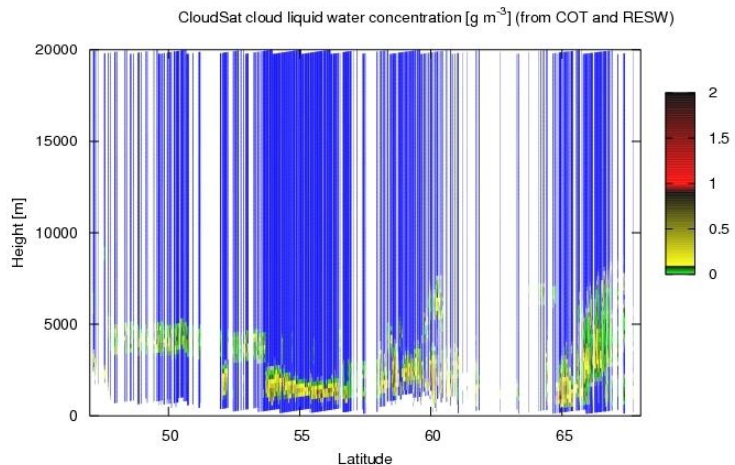

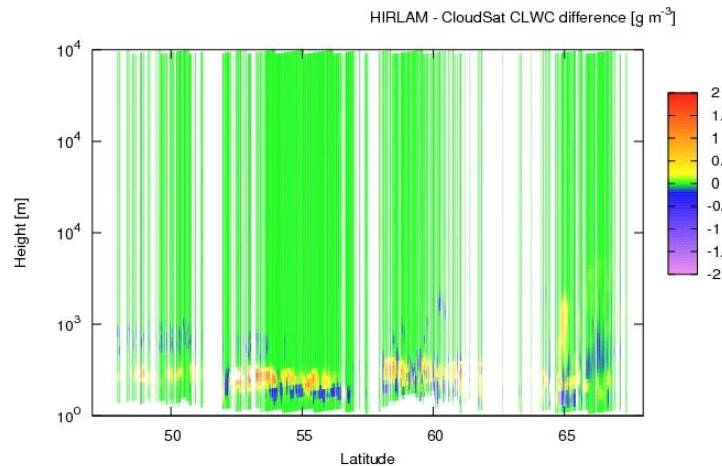

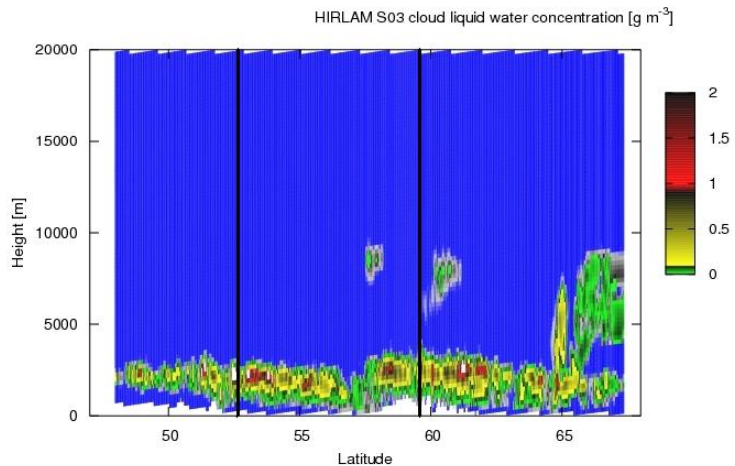

MSG cloud drop effective radius [ $\mu\text{m}$ ] (from CLWP and COT)

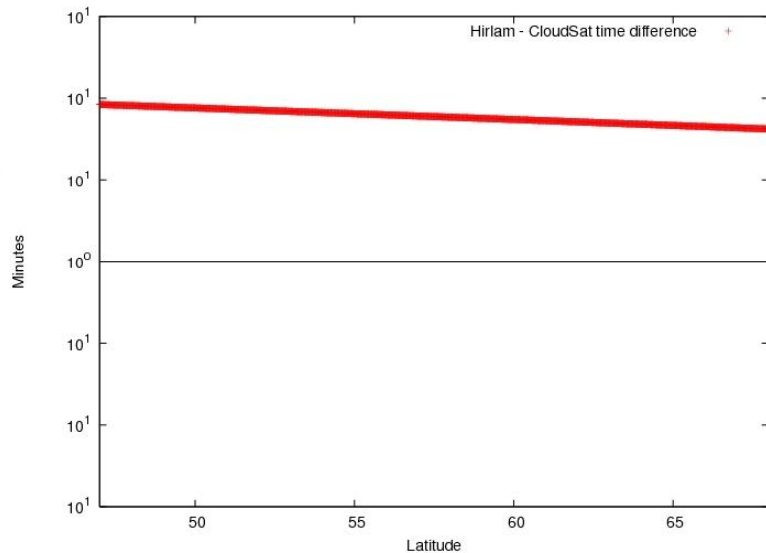

2009-09-06 00:00 +13h forecast

# DMI-HIRLAM & CloudSat CPPs

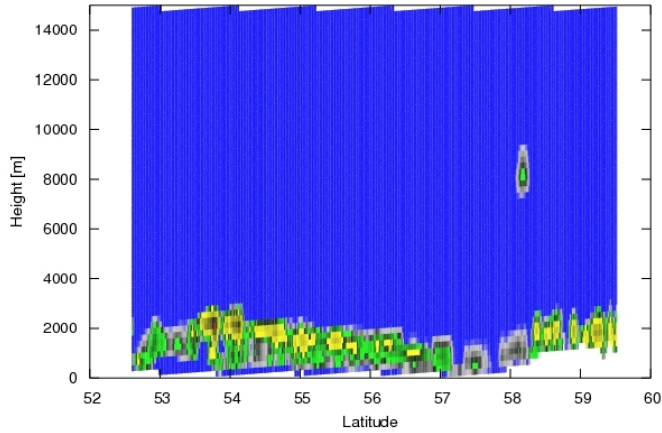

2009-09-06 00:00 +13h forecast

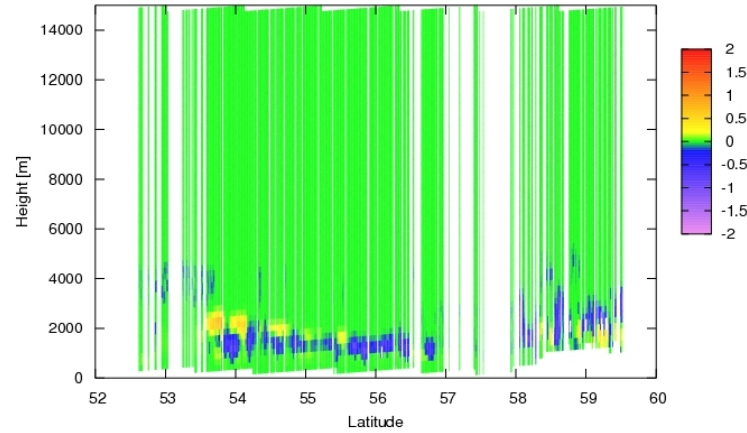

# HARMONIE DK & CloudSat CPPs

Harmonie DK cloud liquid water concentration [ $\text{g m}^{-3}$ ]

Harmonie - CloudSat CLWC difference [ $\text{g m}^{-3}$ ]

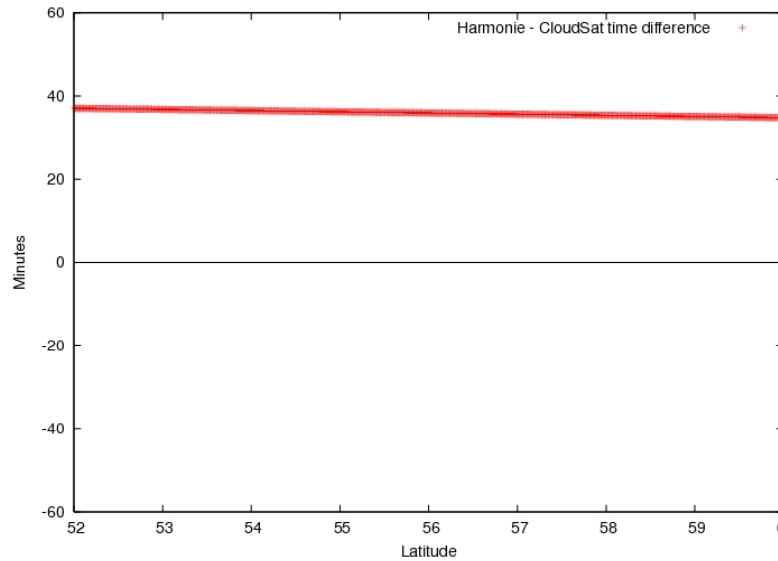

CloudSat cloud liquid water concentration [ $\text{g m}^{-3}$ ] (from COT and RESW)

2009-09-06 00:00 +13h forecast

Harmonie - CloudSat time difference

## Conclusion

- New satellite data of CPPs is likely to be a great tool for NWP verification;
- First results show more realistic cloud liquid water concentration in non-hydrostatic HARMONIE forecasts than in hydrostatic HIRLAM forecasts.
